

Pick of the Week #11 October 22/2009 AD

This week's Pick is GPD.V Golden Predator at 0.59

Golden Predator's corporate mandate is to establish a **self-funded gold exploration** company with an immediate focus on exploring for and developing world class gold deposits in the Yukon's Tintina Gold Belt. The Company seeks internal revenue generation from early high grade precious metals production in Nevada augmented by increasing revenues from its royalty portfolio.

In the Yukon, the Company is aggressively exploring Gold (Scheelite) Dome, Brewery Creek, and Antimony Mountain in the Tintina Gold Belt. In addition, further advanced exploration & development projects within this prolific Belt are being evaluated for potential acquisition.

In Nevada, Golden Predator is drilling a number of its properties with bonanza-style gold mineralization in 2009 with the intent of identifying one or more properties for near term production of small-tonnage high grade ores. The Company intends, through its strategic use of its Taylor Mill near Ely, Nevada and a facilities use agreement at EMC Metals Corp.'s Springer Facility in Pershing County, Nevada, to become a mid-tier precious metals producer.

Golden Predator is partially self-financed through its passive pre-production royalty stream from a portfolio of properties, yielding approximately \$1.2 million during 2009. The Company owns royalties on several known deposits including a portion of the Barrick Bald Mountain property, the Pan deposit of Midway Gold, significant portions of US Gold's Tonkin Springs deposit and Evolving Gold's Rattlesnake project.

It is not very often one comes across an exploration company that has proven assets, and is able to partially fund further drilling (to increase assets), from revenue that is derived from royalties.

For more information visit the website at www.goldenpredator.com or visit www.google.com and type in 'Golden Predator', to see what others have written about the company.

The company has only been listed a few months and therefore does not have a lot of chart history. What we do have looks positive. The trend is up and the supporting indicators (RSI and MACD) are turning up from support levels. Recent 'up volume' has exceeded 'down volume' (green arrow). Once price breaks out above .65c (blue arrow), the expectation is for price to challenge the previous high at 0.87c.

As soon as the company begins production in Nevada, the price target will be much higher. In 1980 at the height of the bull market in gold, every gold producer traded at 10.00 or higher!

Following is a review of previous picks.

#1 CPQ.V at 2.01; last traded at 2.39.

#2 CGC.TO (US CGLD.BB) at 0.69; last traded at 0.80.

#3 SVM.TO (US SVM) at 3.74; we took profits at 5.98 on October 20th. Subscribers were informed. Profit was 2.24 = 60% or 360% annualized.

#4 SCP.TO at 3.10; last traded at 4.00.

#5 FCG at 14.88; we took profits at 18.69 on October 20th. Subscribers were informed.
Profit was 3.81 = 25% or 250% annualized.

#6 MAG.TO (US MVG) at 5.55; last traded at 6.07.

#7 ARZ.TO (US AZK) at 4.60; last traded at 4.88.

#8 IPT.V at 0.88; last traded at 0.83.

#9 RUN.V (US RFXRF otc BB) at 0.22; last traded at 0.255

#10 KCL.TO at 2.74; last traded at 2.89

To be informed the day we take profits all you need to do is become a subscriber. Details on this website under “how to subscribe”. Those of you who participate in this part of our operation are invited to shop carefully. Buy the stock at your price. Avoid ‘market orders’. Sometimes an earlier pick becomes available at a ‘pull-back price’ because a large investor needs money and sells his holding, unaware of the future potential of the stock.
